DETAILED ACTION

Preliminary Amendment

1. The present Office Action is based upon the original patent application filed on 01/17/2006 as modified by the preliminary amendment filed on 04/14/2005. Claims 27-46 are now pending in the present application.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. The information disclosure statement (IDS) submitted on 04/14/2005 has been considered by the examiner and made of record in the application file.

Allowable Subject Matter

- 4. Claims 27-46 are allowed.
- 5. The following is an examiner's statement of reasons for allowance:

Consider claims 27-46, the best prior art of record found during the examination of the present application, Olsson et al. (wo200227953) fail to specifically disclose, teach, or suggest an electric circuit for use as a radio receiver comprising: the analogue frequency mixer means comprising a plurality of mixers being switchable into and out of

Art Unit: 2618

use in order to configure the mixer means, at least one of the mixers being reused for different configurations of the frequency mixer means.

Olsson et al. clearly disclose an electric circuit for use as a radio receiver or as part of a radio receiver, the electric circuit comprising: amplification means (figure 5, LNAs 5.6.7) for receiving an analogue input signal; analogue frequency mixer means (figure 5, mixers 9 and 10) for receiving an output of the amplification means to downconvert a wanted component of the amplified input signal to one of at least two intermediate frequency bands; analogue filter means for receiving an output of the frequency mixer means, the filter means being switchable between at least two filter configurations (figure 6); and control means (control means controlling switches) coupled to the frequency mixer means and to the filter means and capable of selecting a frequency mixer means operating mode and filter configuration appropriate to the input signal to provide at least two of a low-IF, zero-IF, and superheterodyne architecture (figures 1-6, page 8 lines 5-16).

However, Olsson et al. only disclose a switch means switches between different receiving modes, and having a configured mixer means coupled to a configured filter means fixed to a receiving mode. These teachings clearly differ from the claimed invention; therefore, claims 27-46 of the present application are considered novel and non-obvious over the prior art and, consequently, are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably Art Unit: 2618

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. Any response to this Office Action should be faxed to (571) 273-8300 or mailed

to: Commissioner for Patents
P.O. Box 1450

Alexandria, VA 22313-1450

Hand-delivered responses should be brought to

Customer Service Window Randolph Building 401 Dulany Street Alexandria, VA 22314

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to RuiMeng Hu whose telephone number is 571-270-1105. The examiner can normally be reached on Monday - Thursday, 8:00 a.m. - 5:00 p.m., EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edan Orgad can be reached on 571-272-7884. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
